Building Virus and Malwares

Objectives:

The objective of building viruses and malware can be to compromise computer systems, steal sensitive information, disrupt operations, or facilitate unauthorized access.
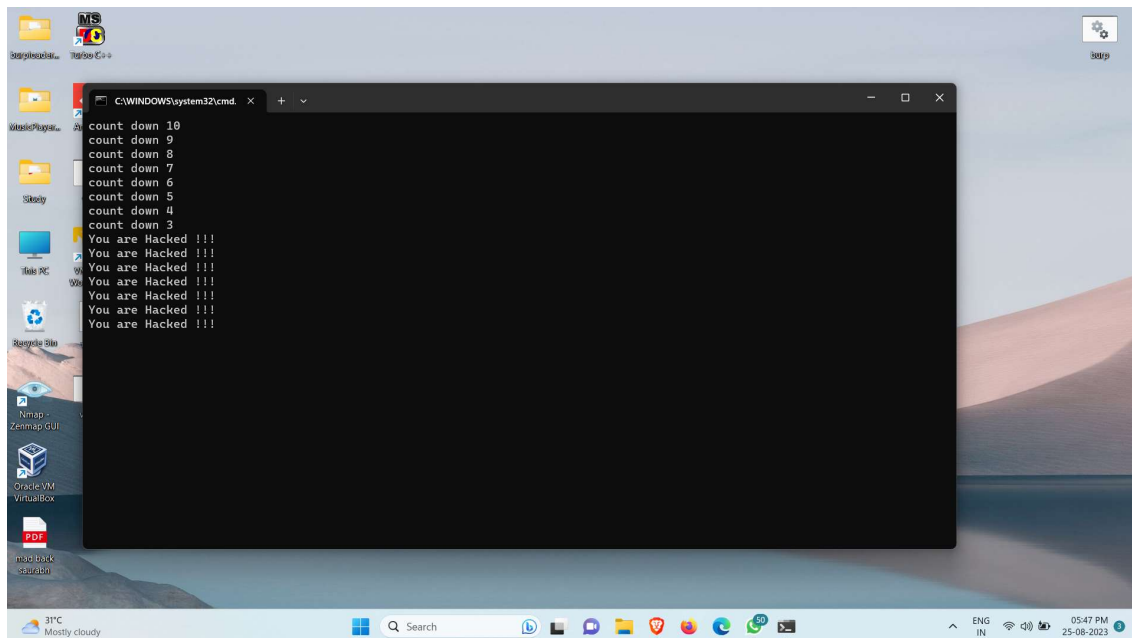

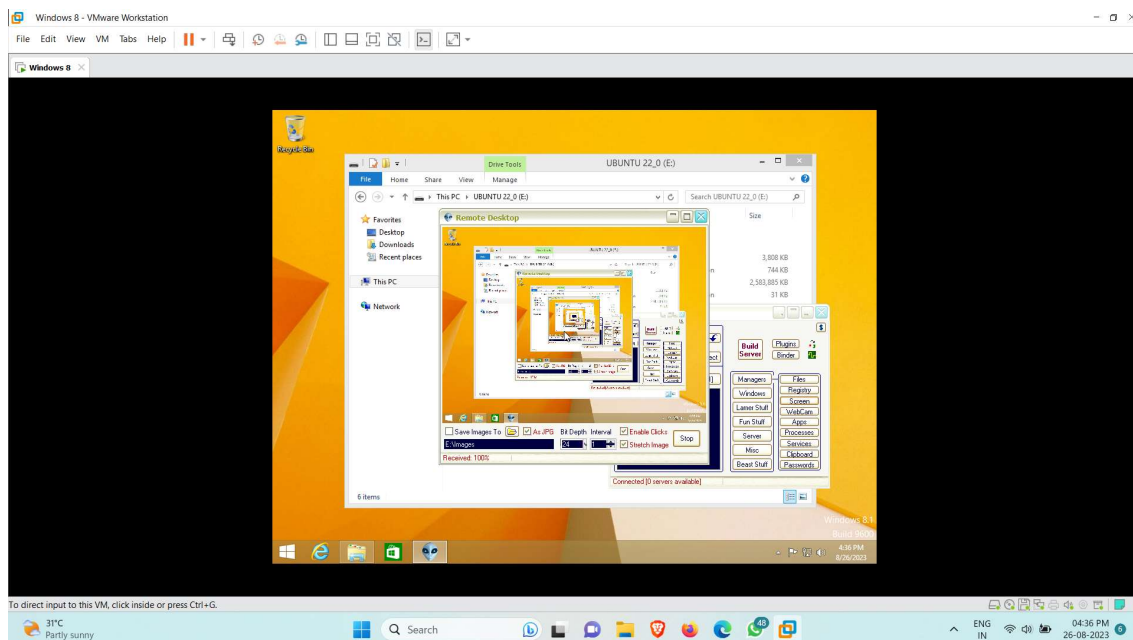

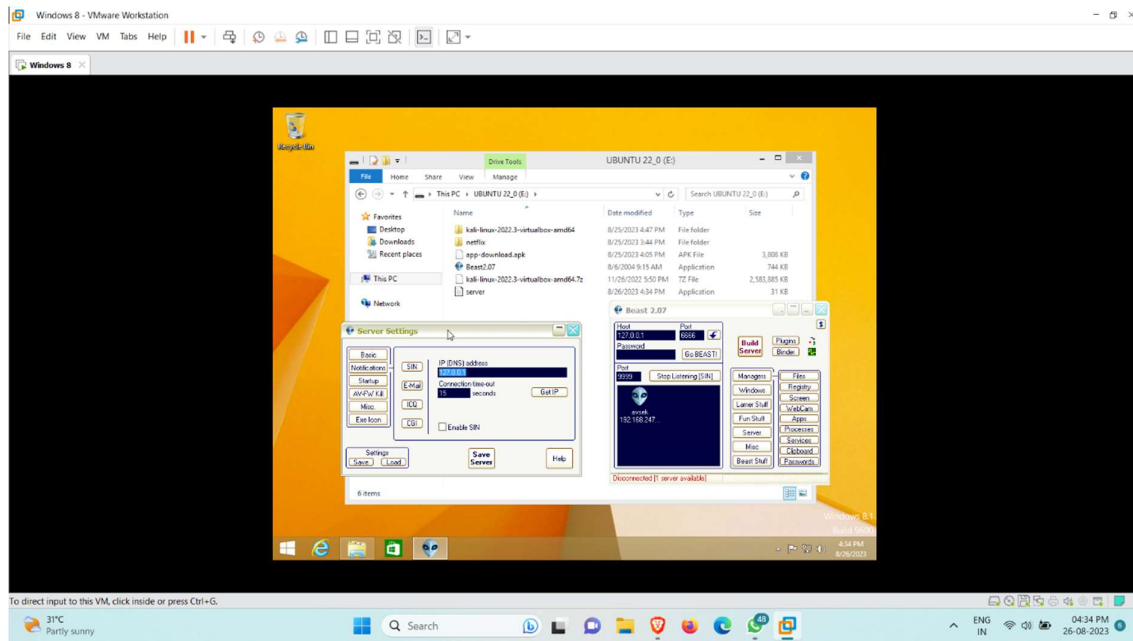

Methodology:

- Batch Virus
- Remote Administration Tool (RAT)

Tool:

- Beast Remote Execution Tool

Proof of concept (POC):

Conclusion:

In conclusion, the creation and deployment of viruses and malware underscore the need for robust cybersecurity measures, user education, and collaborative efforts to mitigate risks, protect digital ecosystems, and ensure the integrity of online activities.
